

MMU DIP Switch Program Card

DIP Switches for all programmable functions of the MMU Program Card make modifications to the MMU set-up fast and easy.

The MMU-EXT Program Card is designed to facilitate cabinet testing when multiple Program Card configurations are needed.

The MMU-EXT Program Card is compatible with any MMU meeting the requirements of NEMA TS2-2003, including all variants of the MMU-1600G and MMU-1600D models.

This product is intended for cabinet test use only and is not designed or provided for on-street use.
